## 12. ECOLOGICAL INFORMATION

Rat oral LD50 (mg/kg)

The product is a emulsion of high molecular, liquid polymer and is characterized by a very low vapour pressure. It can enter the atmosphere only as an Aerosol.

: > 2000 estimated value from available datas.

Investigations showed that siloxane does not have toxic effect on sludge organism. Tests showed that siloxane containing sludge brought on agriculture soil did not give negative effects on ground organisms, earthworm and the following growth of the plants.

In the ground siloxane is decomposed into small silicones molecules abiotically. These small silicone molecules are decomposed biologically in the soil or evaporate from the soil and are decomposed in the

atmosphere under the influence of light. Under suitable conditions the following decomposition products are obtained;

Carbondioxide, inorganic silicone and water vapour.

The size of high molecular siloxane molecule prevents the absorption into or passage through biological membranes.

# Owing to the low water solubility of siloxane, OECD 302 B standard procedure for testing BIOELIMINATION is applied.
