SAFETY DATA SHEET
(According to 1907/2006/EEC)
HYDROSIL 8900

In the ground siloxane is decomposed into small silicones molecules abiotically. These small silicone molecules are decomposed biologically in the soil or evaporate from the soil and are decomposed in the atmosphere under the influence of light. Under suitable conditions the following decomposition products are obtained;

Carbondioxide, inorganic silicone and water vapour.

The size of high molecular siloxane molecule prevents the absorption into or passage through biological membranes.

Owing to the low water solubility of siloxane, OECD 302 B standard procedure for testing BIOELIMINATION is applied.

fish LC50 (mg/kg) : > 11 estimated value from available datas.

Biodegradability : >81%
