Rat oral LD50 (mg/kg) : > 2000 estimated value from available datas.
Rat inhalation LC 50 (mg/kg) : No data available

12. ECOLOGICAL INFORMATION

The product is a emulsion of high molecular, liquid polymer and is characterized by a very low vapour pressure. It can enter the atmosphere only as an Aerosol.

Investigations showed that siloxane does not have toxic effect on sludge organism. Tests showed that siloxane containing sludge brought on agriculture soil did not give negative effects on ground organisms, earthworm and the following growth of the plants.

In the ground siloxane is decomposed into small silicones molecules abiotically. These small silicone molecules are decomposed biologically in the soil or evaporate from the soil and are decomposed in the atmosphere under the influence of light. Under suitable conditions the following decomposition products are obtained;

Carbondioxide, inorganic silicones and water vapour.

The size of high molecular siloxane molecule prevents the absorption into or passage through biological membranes.

Owing to the low water solubility of siloxane, OECD 302 B standard procedure for testing BIOELIMINATION is applied.

LC50 – 96 hrs. (fish) (mg/l) : > 100 estimated value from available datas.
Biodegradation (%) >30% (OECD 301 D)
